All lectures English Spoken

Prof John Leddy

John Leddy
Professor of Clinical Orthopaedics and Rehabilitation Sciences
State University of New York at Buffalo Jacobs School of Medicine and Biomedical Sciences.
As a fellowship-trained primary care sports medicine physician, my goal is to provide the best evidence-based evaluation and treatment to patients with concussion and post-concussion syndrome, and to conduct clinical and physiological research on these conditions. I currently serve as medical director of the UB Concussion Management and Research Center. My primary research interest is the investigation of the basic mechanisms of the disturbance of whole body physiology in concussion and how to help restore the physiology to normal to help patients recover and safely return to activity and sport.

Dr Michael Vianin

Michael Vianin
is a chiropractor with a master`s degree in Rehabilitation Sciences and over 20 years of experience treating patients with musculoskeletal disorders and pain. He specializes in the management of complex clinical cases, including concussion management.
In addition to his clinical practice, Michael has extensive experience in teaching musculoskeletal rehabilitation and mentoring interns and residents, contributing to the development of future healthcare professionals.
Michael currently combines several professional roles, including caring for patients in his private practice, serving as a supervising clinician at the Lausanne University Hospital (CHUV), and working as a member of the medical staff for HC Fribourg-Gottéron.
He is also actively involved in healthcare governance, serving on several boards within the Swiss healthcare system and contributing to the development of the chiropractic profession at the international level.
